Maximo Ospital

FULL-STACK DEVELOPER

Buenos Aires, Argentina | mospital@frba.utn.edu.ar | maximoospital.xyz

I'm a 21-year-old developer from Argentina interested in all things development, from technical support and bug fixing to designing and maintaining both the backend and frontend functionality of an application, be it a desktop, web or mobile product.

Objective

To obtain new challenges that allow me to further develop my technical skills and to participate in new and interesting projects that pique my interest and curiosity.

Experience

Avatar | Junior Developer   **2022 - Present**

- Mantained a JIRA-based Ticket workflow where changes were requested by the client themselves and were subsequently pushed from a Cloud9 instance to their respective Bitbucket repositories.
- Fixed bugs and updated multiple websites running on a Headless Nuxt-WP stack
- Made a custom VueJS and Python-based CMS from scratch for managing SaaS services.
- Worked with Docker, Twig, Python, CSS, VueJS, Nuxt, HTML, FastAPI and MariaDB.

Sindicato del Petrolero Jerarquico (SPJ) | System Administrator (Freelance)   **2019 - 2021**

- Setup and ran a PHP and MySQL Docker server in an AWS instance and migrated to GoDaddy.
- Worked with the client to build and design a modern Wordpress-based website.
- Set up a SSH credential-based host for a bash shell in a remote Ubuntu installation.
- Configured a news scraper using Python and PHP to create an RSS feed for articles.

My Personal Projects as a Programmer

- Released multiple Chrome extensions built in HTML and JS, the two most successful being Fabiofy, a comedic YouTube extension that creates a randomized overlay for thumbnails, and GitDumb, a small Quality-of-Life addon for GitHub.
- Built FanCMS, an open source template for VueJS, Python and SQL (MariaDB) CMS systems.
- Made numerous web-apps running on NuxtJS, React and HTML+JS, the two most successful being Flandertron3000, an HTML webapp to create custom 'memes', and MenstrualCalc, a NuxtJS-based Menstrual Cycle calculator with moon calendar and Google Calendar features integrated.
- Created Maxi's Remote Play Launcher, a desktop app based on Flutterthat allows users to stream and play local multiplayer games through the internet seamlessly and quickly through Steam's hidden Remote Play Together features, this app being a launcher and frontend for it.
- Currently working on an unannounced large-scale social platform based on NextJS and Elixir, an open-source NextJS platform for backendless ecommerce and a small video creation webapp based on HTML and JS.

Education

Universidad Tecnologica Nacional   **2021**
'Entropia' Entry Course

Universidad de Buenos Aires   **2022 - Present**
Computer Science

Skills & abilities

- Problem solving
- Communication
- Ticket-based workflow
- Researching and learning
- Flutter
- VueJS
- NodeJS
- Devops tasks
- Bash
- Git
- Python
- HTML, CSS and JS
- SQL and MariaDB
